## DETAILED ACTION

### *Election/Restrictions*

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Figures 1-5b having a joint (19) and rod (5) configuration

Figures 6-8 having a joint (27) and pin (29) configuration

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Figures 1-5b correspond to claims 2-4 and 7-8

Figures 6-8 correspond to claims 5-6

The following claim(s) are generic: claim 1 is generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Figures 1-5b display a joint and rod combination that provides free pivoting motion about the axis of the rod. This combination is of a pivot that has ends in a U-shaped profile. Figures 6-8 display an articulated pin and joint assembly in cooperation with a spring assembly so that the pivoted angle is locked into place.

USPN 4,852,210 to Krajicek discloses a rectangular plate with gripping and manipulating means (Figure 1), means for securing textile (Figures 1 and 5), the gripping and manipulating means being interchangeable of a broom-stick or handle (Figure 5 (6) and Figure 1), a central rod (Figure 2 (8)), and means for securing textile being clamping mechanisms cooperating with windows or cavities in the plate (Figure 5) as claim 1 in addition recites.

A telephone call was made to George E. Oram Jr. on December 13, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
